Executive Overview

CORE PERFORMANCE INDICATORS

$1.41M Total Revenue (2024–2026)	3.4K Total Active Customers	$117.38 Average Order Value (AOV)
24.5K Total Items Sold (QTY)	$103K Total Discount Given	8.46% Return Rate Across Orders

🎯 **STRATEGIC SUMMARY**

Exceptional customer loyalty (88.47% repeat rate) and steady annual revenue ($0.56M in 2024 and $0.57M in 2025) establish a solid foundation, though operational bottlenecks require immediate executive intervention.

Time-Series & Sales Trends

MONTHLY REVENUE & SEASONALITY

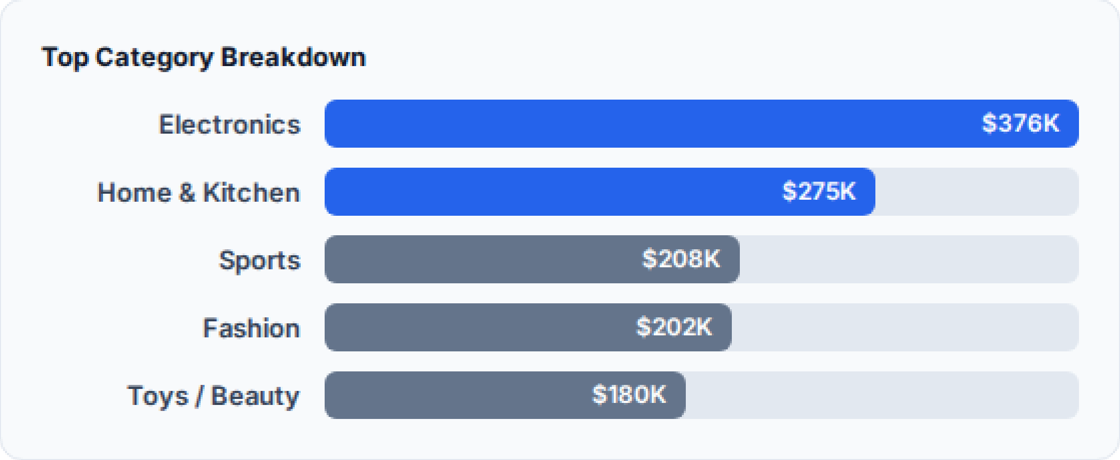
- Peak Performing Month: March leads annual sales at $144K, closely followed by June ($140K) and April ($139K).
- Peak Sales Day: Thursday experiences the highest daily transaction velocity across all weeks.
- Yearly Stability: 2024 revenue reached $0.56M and 2025 scaled to $0.57M (+2.27% growth).
- Cancellation Rate: Recorded at 9.97%, requiring supply chain monitoring.

Top Months by Revenue

Product Category Dominance

THE 45% REVENUE ENGINE

- Electronics Category: Generates $376K+ alone, representing nearly 27% of total company gross revenue.
- Home & Kitchen Category: Captures $275K+, accounting for nearly 20% of sales.
- Concentration Risk & Opportunity: Just these two core categories combine for over 45% of total gross revenue.
- Sports & Fashion form a secondary tier (~$200K each), while Books & Grocery lag behind in absolute monetary yield.

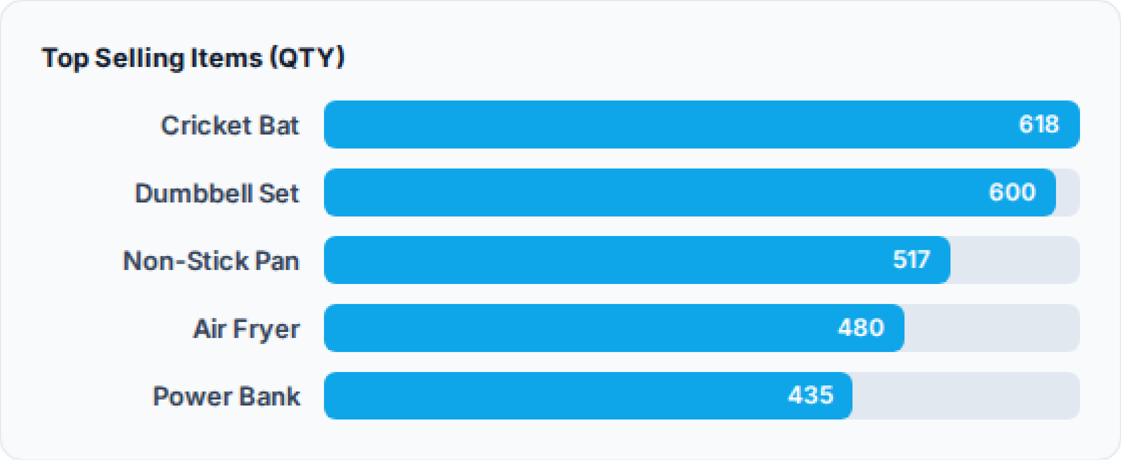


💡 CATEGORY STORYTELLING

Our catalog is anchored by high-intent Electronics and Home Goods. To maximize profitability, we must protect supply chain integrity for these top two categories while bundling slower-moving items (Books, Grocery) to lift overall basket sizes.

Product Intelligence

TOP PRODUCTS BY QUANTITY SOLD

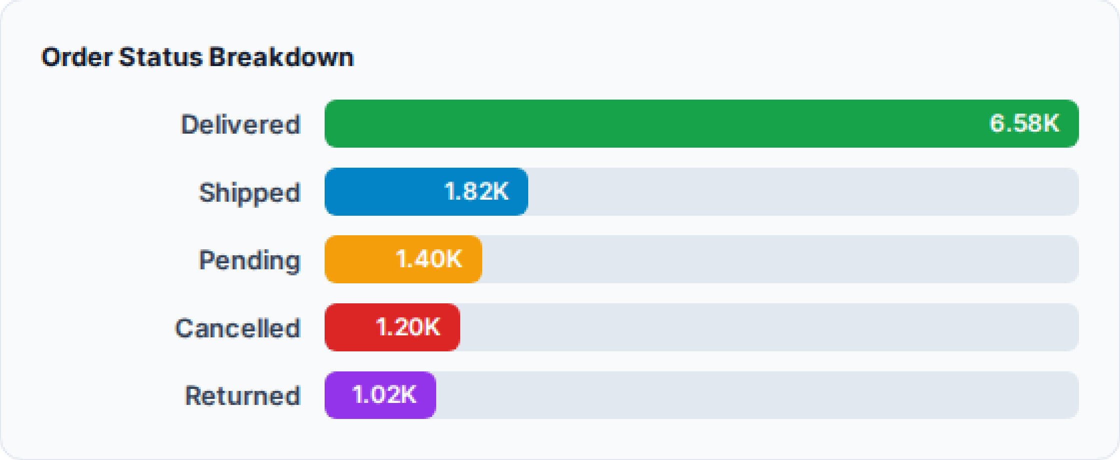


- Volume Leaders: Cricket Bats (618 units) and Dumbbell Sets (600 units) lead physical sales volume.
- Revenue Drivers: Gaming Mouse ($47.2K), USB-C Cable ($46.9K), and Non-Stick Pan ($46K) maximize monetary yields.
- Flagship Item: Power Bank emerges as a top cross-category best-seller.
- Electronics & Home Goods continue to anchor total basket values.

Operational Deep Dive

THE DELIVERY RATE BOTTLENECK

- Critical Vulnerability: The overall delivery success rate stands at only 54.82%, representing a major friction point in customer experience.
- Revenue at Risk: Over $163K in potential revenue is currently trapped in pending and shipping statuses.
- Order Breakdown: 6.58K delivered successfully, 1.82K shipped, 1.40K pending, 1.20K cancelled, and 1.02K returned.
- Return rate is recorded at 8.46%, pointing to specific product quality verification needs before dispatch.



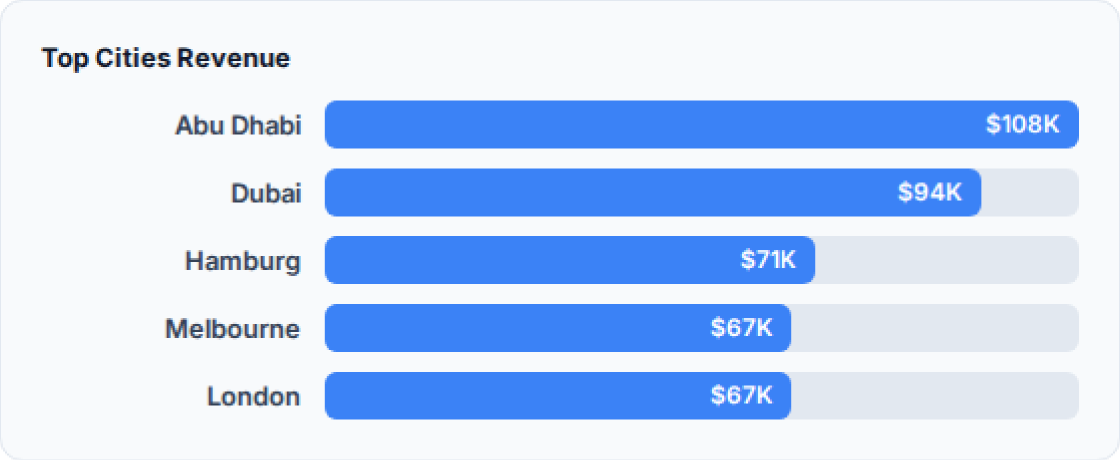
🚨 **URGENT OPERATIONAL ACTION REQUIRED**

A 55% delivery fulfillment rate creates severe customer dissatisfaction and stalls cash conversion. Establishing regional micro-fulfillment hubs will instantly mitigate transit delays and recover the $163K at-risk revenue.

Geographic & City Insights

TOP 5 CITIES BY REVENUE

- Top City by Revenue: Abu Dhabi ($108K) and Dubai ($94K) capture primary Middle Eastern market share.
- International hubs like Hamburg ($71K), Melbourne ($67K), and London ($67K) demonstrate strong European and APAC traction.
- Country distribution across UAE, UK, Germany, India, USA, Canada, and Australia shows balanced global demand.



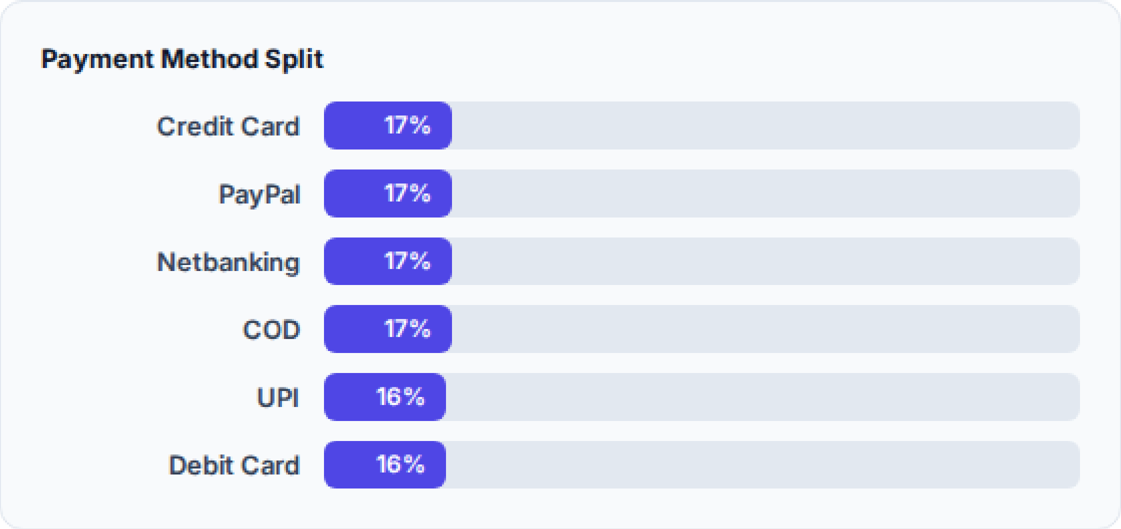
Customer Retention & Demographics

NEW VS REPEAT CUSTOMERS

- Exceptional Loyalty: 88.47% repeat customer rate demonstrates world-class brand equity and product satisfaction.
- Average Order Quantity: 2.04 items per transaction, indicating healthy multi-item basket additions.
- Average Discount provided sits at 6.87%, maintaining healthy gross operating margins.
- Payment gateway adoption is evenly balanced across Credit Card, COD, UPI, and Netbanking.

Payment Gateway Distribution

TRANSACTION METHOD SHARE

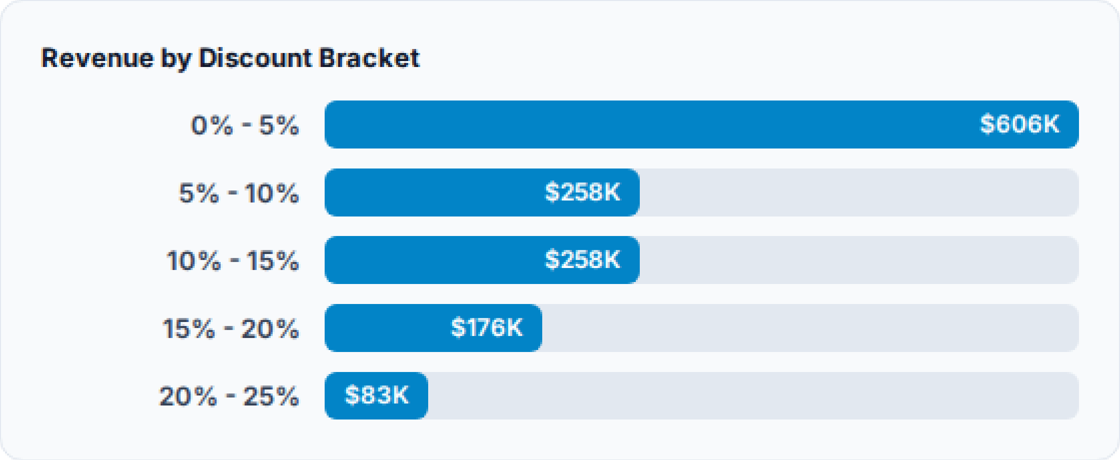


- Balanced Adoption: Payment distribution is exceptionally uniform across all 6 primary gateways (~16% to 17% each).
- Low Gateway Risk: No single payment provider poses dependency risk, ensuring smooth global transactions.
- Cash on Delivery (COD) accounts for 17.25%, aligning with regional preferences in Middle Eastern markets.

Pricing & Discount Dynamics

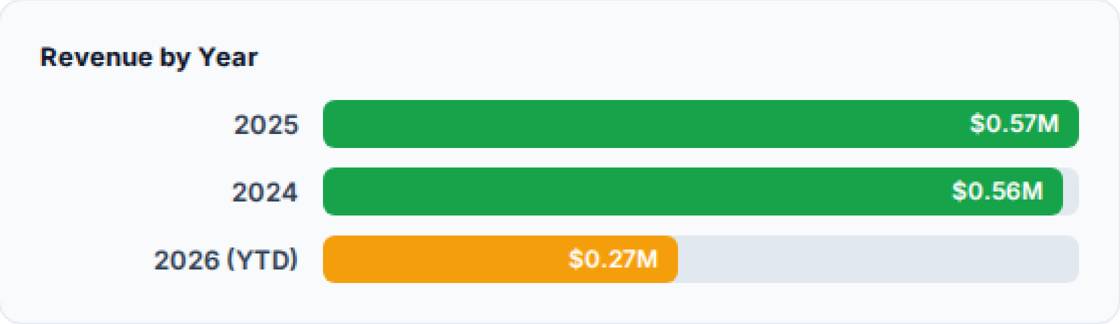
DISCOUNT VS REVENUE IMPACT

- Discount Correlation: Correlation between discount percentage and sales volume is very weak (r = -0.07).
- Blanket Discounts Ineffective: High discounts do not automatically trigger higher sales volume.
- Optimal Yield: 0% to 5% discount brackets capture the largest share of revenue ($606K).



Year-over-Year Performance

ANNUAL REVENUE GROWTH



- Consistent Growth: 2025 scaled to $0.57M representing a healthy +2.27% YoY growth over 2024 ($0.56M).
- YTD 2026: Already records $0.27M in cumulative gross transactions.
- Strong foundation for Q4 holiday push to exceed previous years' benchmarks.

Strategic Narrative

BALANCING GROWTH & OPERATIONS

- The Growth Paradox: While top-line revenue ($1.41M) and repeat customer rate (88%) are world-class, fulfillment friction threatens long-term brand advocacy.
- Category Leverage: Electronics and Home Goods act as customer acquisition magnets; cross-selling accessories into these baskets will maximize margin yield.
- Operational Fix: Resolving the 45% delivery lag is the single highest ROI lever available to management.

🎯 THE EXECUTIVE NARRATIVE

"We have proven product-market fit across global hubs and achieved extraordinary brand loyalty. The next phase is operational excellence: securing our supply chain to convert pending orders into delivered revenue."

Strategic Recommendations

ACTION PLAN

Strategic Focus	Recommended Action	Expected Impact
📈 Demand Scaling	Increase inventory allocation for March/June seasonal peaks and top categories (Electronics & Home Goods).	Maximize top-line revenue capture without stockouts.
🚚 Fulfillment Audit	Establish regional micro-fulfillment centers in Abu Dhabi and Dubai to reduce transit friction.	Recover $163K pending revenue and improve delivery success rate above 75%.
🔄 Retention Engine	Leverage the 88.47% repeat customer rate with personalized loyalty rewards and VIP tiers.	Sustain high customer lifetime value (LTV) and recurring orders.
